

The ABOMP CM examination is being given with assistance from the American Board of Pathology (ABPath). For this reason, you will notice the ABPath's information and logo throughout the registration process.

The American Board of Oral and Maxillofacial Pathology (ABOMP) administers our Certification Maintenance (CM) examination remotely from a diplomate's home or office using Pearson VUE's OnVUE online proctor technology.

<https://home.pearsonvue.com/abomp/onvue>

Taking an exam via online proctor requires:

- (1) A quiet, private location
- (2) A reliable computer with a webcam (no tablets)
- (3) A strong internet connection

Occasionally, exam takers encounter difficulty launching the exam, sustaining their internet connection for the exam's duration, suboptimal exam delivery, or other problems. To reduce the likelihood of these problems, detailed instructions are provided in advance. Further, diplomates are required to complete a Pearson VUE System Test using the computer and network intended for use on exam day to confirm the adequacy and compatibility of their computer and internet connection. To perform this test, please visit the <https://home.pearsonvue.com/abomp/onvue> and click 'Perform a System Test' at the bottom of the page.

When problems arise, the Pearson VUE proctor may offer basic assistance. However, the proctor's technical troubleshooting capabilities are quite limited. Consequently, regardless of what caused the problem, the exam may have to be terminated or invalidated. If that happens, the diplomate may have to reschedule to take the exam on another date within the exam window or retake the exam during the following year's exam window. It is therefore recommended that you schedule early in the window.
